CONTENT

P0- Sector & Industry

P1- Research

- Funnel of Lead movement in Residential brokerage
- Who the end users are
- What their real workflow looks like, step by step

P2- What are people in real estate talking about CRM in their processes

- Quotes directly scraped, reviews are people in real estate talking about CRMs
- Understanding and insights - Backed by data, observation, or reasoning

P3- Problem Statement

- Problem Statement
- Hypotheses
- Loss Estimation

P4- Solution

- SuperMatch
- What it's actually doing
- Branding & theming
- GTM strategy
- Metrics to track

P4- Prototype

- Close enough to a real flow that someone can click through it and feel how it behaves inside the CRM

Submission Rules

- One prototype link - nothing else required separately.
- 3-day turnaround from receiving the assignment.
- Questions are welcome; Superleap invites candidates to reach out anytime before starting.

P0: SECTOR & INDUSTRY

Real Estate, Residential brokerage

Biggest Player: Square Yards, 7-8k employees

Lead to conversion: 8-12 touchpoints/lead

Calls per day: 30,000 to 80,000 calls per day(Inbound + Outbound)

P1: RESEARCH

1.1: Overview funnel of Lead movement in Residential brokerage

1.2: Who the end users are: Hands-on daily users inside real estate firms

- **Field sales agents / property consultants are the core users.** Portal leads (99acres, MagicBricks, Housing), call and qualify buyers, run site visits, follow ups.
- **Pre-sales / tele-callers (at larger firms)** make the first call within 5-10 mins, qualify budget, configuration and timeline, book the site visit and pass it to a field agent.
- **Team leads / area sales managers** assign leads, check follow-up discipline and site-visit counts, and coach reps.
- **Sales heads / RevOps / CRM admins** set up pipelines, stages, routing rules and reports, and look at funnel metrics like speed-to-lead and visit-to-booking conversion.
- **Brokerage owners / founders** are the buyers of the CRM.

1.3: What their real workflow looks like, step by step

P2: What are people in real estate talking about CRM in their processes

2.1: Quotes directly scraped, reviews are people in real estate talking about CRMs

Zoho CRM

Exact quote	Reviewer	Source
"Time taking in capturing the real time lead"	Abhishek K., Senior Account Manager, Real Estate	Capterra
"our trial period was useless to test integrations"	Devon P., Marketing Coordinator, Real Estate (Zoho CRM Plus)	Capterra
"customer support doesn't know a lot about their own product"	Verified Reviewer, Acquisition Manager, Real Estate	Capterra
"I wish that it had templates specifically for Commercial Real Estate"	Begin by Zoho CRM user	Capterra
"The email editor also has some limitations and occasionally feels buggy when designing templates"	Mandie K., Director of Marketing, Real Estate (Zoho Campaigns)	Capterra

Freshsales (Freshworks CRM)

Exact quote	Reviewer	Source
"We reported a Freshsales defect in 2025, and it remains unresolved"	Alvin Y., Real Estate Sales Manager & Revenue Manager	G2

"My only initial complaint was a feature I required within one of the systems"	Real Estate reviewer, "The Only Way to Scale 10X"	G2
"I need to be able to send more emails for certain campaigns"	Real Estate reviewer, "Better than Salesforce"	G2
"in app email notifications, website visitor analytics and segmentation" (missing features)	Real Estate reviewer, "FreshSales with Fresh sales"	G2
"there is no predictive dialer, and there is no email templates"	Rudy V., Business Development Manager, Real Estate	Capterra

Salesforce (Sales Cloud / Agentforce Sales)

Exact quote	Reviewer	Source
"Salesforce has so many features that some of them seem a little harder"	William K., Sales Associate, Real Estate	Capterra
"having so much data and so many functions can make it a little clunky"	Kyle R., Transaction Coordinator, Real Estate	Capterra
"the system runs slow with large datasets, and it can take a while"	Ryan C., Analytics Manager, Real Estate	Capterra
"It does not have round robin assignment feature"	Real Estate reviewer, "Great Lead Management, But Missing Round Robin Assignment"	G2

2.2 Understanding and insights - Backed by data, observation, or reasoning

- Reporting is the #1 gap: Zoho, Freshsales, Salesforce, and LeadSquared reviewers all separately flagged rigid or shallow reporting.
- Real estate is not built in: HubSpot's Leads/Deals split, Zoho's missing commercial templates, and Salesforce's missing round-robin assignment all point to the same thing: none of the four general CRMs models a property deal (site visit → booking → registration) natively.
- Field usability lags desk usability: mobile/dialer gaps (Freshsales) and manual re-entry between records (HubSpot) hit hardest for agents doing site visits and calls, not desk-bound admins.
- Support and data trust: Freshsales' unresolved-defect complaint and Salesforce's "opportunity marked won that wasn't" both point to reliability gaps in workflows that carry real money.
- Even Sell.do and LeadSquared: built specifically for this industry draw complaints on customization flexibility and reporting, so purpose-built isn't automatically solving it either; it's a genuine open problem.

P3: PROBLEM STATEMENT

3.1 Problem Statement

Real estate businesses run two systems of record that are each internally accurate but never reconciled with each other in real time: a CRM that knows who wants what, and an inventory ledger that knows what's actually still for sale. Nothing continuously checks one against the other. That creates leakage in both directions and a rep can confirm a site visit for a unit that got sold in the gap between scheduling and showing up, and when a unit frees up (a hold expires, someone cancels), nobody automatically checks it against the backlog of past leads who wanted exactly that configuration and were told "not available."

3.2 Hypotheses

"When a unit's status changes or a lead goes cold, we want the CRM to keep matching it against every lead's real preference on its own — instead of waiting for someone to check now and then — so we recover the chunk of visits and bookings we're currently writing off as the buyer losing interest."

3.3 Loss Estimation

Say a 300 unit project over 2 years. MHub's number tells us a launch weekend alone can move 150+ units, so this problem shows up fast, right on the biggest sales days of the project. If even 3-5% of visits over that stretch hit this issue, out of maybe 2000 visits total, that's somewhere around 60-100 failed visits. Each one is a burned lead, a wasted rep day, and a trust hit, and the Sell.do quote shows buyers actually remember this kind of thing.

On the other side, if a couple hundred leads get marked lost over those 2 years just because their unit wasn't there, and even 5-10% convert once we go back to them, that's 10-20 extra bookings from leads we already paid to get once. At real ticket sizes, that's real money just sitting inside the CRM doing nothing.

Then the softer losses. A broker who gets burned once stops bringing us clients. A rep who gets burned once stops trusting the CRM's inventory and goes back to double checking on WhatsApp groups, which kills the whole point of every other agent we're building too.

P4: SOLUTION

SuperMatch

Part one, stop a bad visit. Unit status changes, Match checks if a visit is booked on it, freezes the visit before the rep confirms, and pulls 2-3 similar available units for that same buyer so the rep has something to offer instead of starting from scratch.

Part two, wake up a dead lead. The unit becomes available, Match checks every lead, including the lost and cold ones, for a match, ranks them by how serious the original interest actually sounded, not just how recently we spoke to them, and sends the top few a WhatsApp naming the exact unit. A human only sees this if someone actually replies.

4.2: What it's actually doing

Stop a bad visit

1. Unit status changes
2. Check if a visit is booked against it
3. If yes, freeze it, pull the buyer's preferences, find similar available units
4. Tell the rep with the alternative already attached
5. Nothing similar available, send to a human instead of forcing a bad match

Wake up a dead lead

1. Unit becomes available
2. Check every lead, active and lost, for a match
3. Rank by how serious the original interest sounded
4. Message the top few, name the actual unit
5. Cap how many people get messaged for one unit, respect opt outs
6. Only a real reply creates work for a human

4.3 Branding & Theming

The big idea

The preference or interest was already captured somewhere in the product. Nothing new needs to be collected. Super Match holds onto that signal and acts the moment a match appears, whether that is the same day or a year later.

Theme

The matchstick and the spark. A match does not expire sitting in the box. It works the same whether it is struck tomorrow or a year from now. Super Match sits ready inside data already collected and lights up the moment a match happens.

Messaging pillars

- The signal was already there. The interest or preference is already in the system.
- Matching, not guessing. A stored preference becomes an exact match the moment the right item, slot, or inventory appears.
- Built to keep watching. It does not expire. A match can happen in week one or month twelve.
- SUPERLEAP understands people, not just data points. Outreach is built around what someone actually wants.

Taglines

- The match was already there.
- Some matches will strike today. Some wait a year for the right moment.
- Matching, not guessing.
- SUPERLEAP already knows who to reach, and when.
- Built to keep watching.

Sample copy

"We found a match for you. You showed interest in this a while back. It just became available, so we matched you to it. That is Super Match: always watching, so you do not have to check back."

Visual direction

- Warm amber and ember tones
- Matchstick, spark, and connecting node motifs
- Calm and confident, not urgent
- Plain language, no hype words

4.4 GTM

Phase 1: foundation, days 1 to 14

- Build a one click "show me my matches" entry point inside the product, no new setup required
- Turn on a free preview of matches so people see value before any commitment
- Produce launch assets: explainer video, blog post, SEO landing page
- Add in app triggers (banners, empty states, tooltips) so the feature surfaces during normal use
- Turn the feature on for the existing user base quietly, as an early listening post

Phase 2: awareness, days 15 to 30

- Public launch through content and community: launch post, founder post, community and launch platform seeding
- Open webinar on how matching works, open registration, no gated sales call
- Self serve activation prompt to the full existing user base
- Broad content led paid promotion rather than narrow account targeting
- Light in product virality: share a match, loop in a teammate

Phase 3: compounding, days 31 to 45

- Educational lifecycle emails to non activators, tips and nudges only
- Start a running content series featuring real matches as they occur
- Expand SEO with use case and comparison pages
- Community spotlights from users sharing their own match moments
- Retarget based on in product behavior, such as viewing the feature without activating it

Phase 4: sustain, days 46 to 60+

- Review the funnel from discovery to activation to repeat use, fix the largest drop off point
- Double down on whichever content or community channel drives activation organically
- Keep a running log of matches as they happen, including the slow ones
- Maintain steady content and in product nudges rather than a sales surge

4.5: Metrics to track

- Discovery to activation to repeat use funnel
- Time to first match
- Organic traffic, social engagement, webinar signups, community mentions
- A running log of real matches as they surface
- Retention and win back revenue, tracked over two to twelve months
